

Cunard Transatlantic Cruises on Queen Mary 2

Queen Mary 2 operates crossings between Southampton & New York from March / April to December annually.

What is a transatlantic cruise?

A transatlantic cruise involves sailing across the Atlantic Ocean from Europe to North America, or vice-versa, with Southampton to New York widely considered the most famous route.

What's the difference between a ship and an ocean liner?

The difference between a cruise ship and an ocean liner is its structure. Ocean liners, like Queen Mary 2, are purpose-built for traversing oceanic waves, with a hull that is thicker and stronger.

The world's only ocean liner.

Queen Mary 2 is one of a kind. Engineering marvel, work of art, and luxurious home from home. Stronger, smoother and swifter than a cruise ship, she was designed with a single purpose: to cross the Atlantic in unparalleled comfort and style. To step on board is to journey into another world, where everything revolves around the guests.
